## Abstract

Quantitative analysis of radiolarian assemblages was used to establish the radiolarian biostratigraphy from Zone RP8 (lower Eocene) to RP16 (middle Eocene) in pelagic sequences recovered at Integrated Ocean Drilling Program Expedition 320 Site U1331 in the eastern equatorial Pacific Ocean.

## Introduction

During Integrated Ocean Drilling Program (IODP) Expedition 320, six sites (U1331–U1336) were cored in the eastern equatorial Pacific Ocean (see the “[Expedition 320/321 summary](#)” chapter [Expedition 320/321 Scientists, 2010]). Early and middle Eocene thick radiolarian-rich biogenic sediments were collected at Site U1331 from Cores 320-U1331C-17X to 320-U1331A-6H. A total of 232 species and species groups were encountered in this study. We report the results of the quantitative data of radiolarian assemblage variation from the early to middle Eocene.

## Materials and methods

Three holes were cored at Site U1331 (12°04.088'N, 142°09.708'W; 5116 meters below sea level [mbsl]) (Fig. F1). Early–middle Eocene sedimentary sequences from Site U1331 are composed mainly of radiolarian ooze with chert from Cores 320-U1331C-17X to 320-U1331A-11H and alternations of nannofossil ooze and radiolarian ooze from Cores 320-U1331A-11H to 320-U1331A-6H. In this study, depths reported as meters below seafloor (mbsf) indicate the revised composite core depth below seafloor, method A (CCSF-A), depth scale for the sediments as described in [Westerhold et al.](#) (2012).

Samples were prepared following the procedures outlined in Sanfilippo et al. (1985). Dried and weighed core sediment sample was placed into a beaker with 10% H<sub>2</sub>O<sub>2</sub> to remove organic material and HCl solution to remove the calcareous fine fraction from radiolarian shells. After boiling for a few minutes, the sample was sieved and washed through a 63 µm mesh. The dried materials were divided equally into subsamples by a simple splitter to obtain ~2000 radiolarians. One sample split was moved to a slide, mounted with Canada balsam, and covered with a 24 mm × 40 mm cover glass. All radiolarian skeletons on the slides were

observed and counted under light in order to reveal the faunal compositions (Table T1). For Site U1331, a total of 65 samples was examined.

## Results

The zonal scheme of Sanfilippo and Nigrini (1998) was adopted for this study. The interval studied at Site U1331 was divided into nine radiolarian zones from Zone RP8 to RP16 (Sanfilippo and Nigrini, 1998). Terms used in this study to express events include evolutionary transition (ET), first occurrence (FO), and last occurrence (LO). The concept of evolutionary transition follows that of Sanfilippo and Nigrini (1998).

### Zone RP16

*Podocyrtis (Lampterium) goetheana* interval zone (Moore, 1971, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the FO of *P. goetheana*. The interval from Samples 320-U1331A-6H-2, 105–107 cm (52.90 mbsf), to 7H-4, 95–97 cm (67.95 mbsf), was assigned to this zone. This zone contains the following species: *Anthocyrtoma* spp., *Calocycloma ampulla*, *Dorcadospyrus anastasis*, and the *Lithocyclia aristotelis* group.

### Zone RP15

*Podocyrtis (Lampterium) chalara* lineage zone (Riedel and Sanfilippo, 1970, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the ET of *P. chalara*. The interval from Samples 320-U1331A-7H-CC (72.41 mbsf) to 9H-4, 105–107 cm (88.6 mbsf), was assigned to this zone. This zone includes the following species: *Lithochytris vespertilio*, *Lophocyrtis biaurita*, *Podocyrtis sinuosa*, and *Sethochytris triconiscus*.

### Zone RP14

*Podocyrtis (Lampterium) mitra* lineage zone (Riedel and Sanfilippo, 1970, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the ET of *P. mitra*. Samples 320-U1331A-9H-CC (92.97 mbsf) through 13H-2, 104–106 cm (130.21 mbsf), were assigned to this zone. In this zone, *Eusyringium lagena*, *Podocyrtis fasciolata*, *Podocyrtis heleneae*, *Podocyrtis trachodes*, and *Zeolithapium anoectum* were recognized at Site U1331.

### Zone RP13

*Podocyrtis (Podocyrtoges) ampla* lineage zone (Riedel and Sanfilippo, 1970, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the ET of *P. ampla*. The interval spans from Samples 320-U1331A-13H-4, 104–106 cm (133.21 mbsf), to 14H-2, 104–106 cm (140.80 mbsf). This zone contains the following species: *Calocyclus trichopa*, *Dendrospyris didiceros*, *Eusyringium fistuligerum*, *Thrysocyrtis triacantha*, and the *Lithocyclia ocellus* group.

### Zone RP12

*Thrysocyrtis (Pentalacorys) triacantha* interval zone (Riedel and Sanfilippo, 1970, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the FO of *E. lagena*. This zone was recognized from Samples 320-U1331A-14H-4, 104–106 cm (143.80 mbsf), to 16H-CC (159.38 mbsf). In Zone RP12 at Site U1331, *Calocycloma ampulla*, *Lychnocanoma bajunensis*, *Periphera tripyramis triangula*, and *Rhopalocanium ornatum* were included in deep-sea sediments.

### Zone RP11

*Dictyoprora mongolfieri* interval zone (Riedel and Sanfilippo, 1970, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the FO of *D. mongolfieri*. Samples 320-U1331A-17X-2, 104–106 cm (170.53 mbsf), through 19X-2, 25–27 cm (182.64 mbsf), were assigned to this zone. This zone includes the following species: *Buryella clinata*, *Calocycloma castum*, *Lithochytris archaea*, and *Zeolithapium plegmacantha*.

### Zone RP10

*Theocotyle cryptocephala* interval zone (Foreman, 1973)

The base of Zone RP10 is defined by the ET of *T. cryptocephala*. This zone was found in Sample 320-U1331A-19X-CC (182.76 mbsf) and contains the following species: *Lithochytris vespertilio*, the *L. ocellus* group, *Phormocyrtis embolum*, *Phormocyrtis striata striata*, and *Stylosphaera coronata coronata*.

### Zone RP9

*P. striata striata* interval zone (Foreman, 1973, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the FO of *Theocorys anaclasta*. Zone RP9 was located in Sample 320-U1331A-20X-CC (187.40 mbsf) and includes the following species: *Dictyophimus craticula*, *P. tripyramis triangula*, *P. embolum*, and *S. coronata coronata*.

### Zone RP8

*Buryella clinata* interval zone (Foreman, 1973, emend. Riedel and Sanfilippo, 1978)

The base of this zone is defined by the ET of *B. clinata*. The interval from Samples 320-U1331C-16H-2, 52–59 cm (200.27 mbsf), to 17H-2, 49–56 cm (lowermost sample in this study), was assigned to Zone RP8. This zone contains the following species: *Giraffospyris lata*, *Lamptonium sanfilippoae*, *Lophocyrtis biaurita*, *Lychnocanoma auxilla*, and *Thrysocyrtis rhizodon*.

## Species list

- Albatrossidium minzok* Sanfilippo and Riedel, 1992, p. 18, pl. 1, figs. 18, 19, pl. 2, fig. 7.
- Amphicraspedum murrayanum* Haeckel—Sanfilippo and Riedel, 1973, p. 524, pl. 10, figs. 3–6, pl. 28, fig. 1.
- Amphicraspedum prolixum* Sanfilippo and Riedel group—Sanfilippo and Riedel, 1973, p. 524, pl. 11, figs. 1–5, pl. 28, fig. 5; *Amphicraspedum prolixum* Sanfilippo and Riedel, 1973, p. 524, pl. 10, figs. 7–11, pl. 28, figs. 3, 4; Kozlova, 1999, p. 100, pl. 20, fig. 4, pl. 22, fig. 16, pl. 42, fig. 5.

## Acknowledgments

The authors are grateful to scientists and crew members of Expedition 320 of the R/V *JOIDES Resolution* for their support and prompt attention to our requests. Samples and data were provided by the Integrated Ocean Drilling Program (IODP). Funding was provided by a Grant-in-Aid for Research Fellowships of the Japan Society for the Promotion of Science for Young Scientists (number 20-1155) to the first author. We thank Dr. C. Hollis for reviewing the manuscript.

**Table T1.** Abundance of radiolarian species, species diversity, evenness, and radiolarian mass accumulation rate (MAR), Site U1331. This table is available in an [oversized format](#).

**Plate P1.** Photographs of selected radiolarian species. Scale bar = 100 µm. 1. *Podocyrtis (Lampterium) mitra* Ehrenberg (Sample 320-U1331B-11H-CC), R40/2. 2. *Podocyrtis (Lampterium) chalara* Riedel and Sanfilippo (Sample 320-U1331B-5H-CC), L24/0. 3. *Podocyrtis (Lampterium) goetheana* (Haeckel) (Sample 320-U1331B-5H-CC), K23/0. 4. *Eusyringium fistuligerum* (Ehrenberg) (Sample 320-U1331B-6H-CC), C33/0. 5. *Eusyringium lagena* (Ehrenberg) (Sample 320-U1331B-14H-CC), C41/3. 6. *Zeolithapium anoectum* (Riedel and Sanfilippo) (Sample 320-U1331B-13H-CC), T11/3. 7. *Zeolithapium plegmacantha* (Riedel and Sanfilippo) (Sample 320-U1331C-12H-CC), H38/4. 8. *Calocyclas hispida* (Ehrenberg) (Sample 320-U1331B-8H-CC), K42/2. 9. *Dictyoprora mongolfieri* (Ehrenberg) (Sample 320-U1331C-6H-CC), G18/4.

**Plate P2.** Photographs of selected radiolarian species. Scale bar = 100 µm. **1.** *Thrysocyrtis (Thrysocyrtis) robusta* Riedel and Sanfilippo (Sample 320-U1331B-16H-CC), H28/0. **2.** *Thrysocyrtis (Pentalacorys) triacantha* (Ehrenberg) (Sample 320-U1331C-13H-CC), M32/0. **3.** *Theocyrtis perpumila* Sanfilippo (Sample 320-U1331B-6H-CC), Y43/3. **4.** *Podocyrtis (Podocytoges) diamesa* Sanfilippo and Riedel (Sample 320-U1331B-14H-CC), F51/1. **5.** *Peripheraena tripyramis triangula* (Sutton) (Sample 320-U1331B-16H-CC), H32/0. **6.** *Lithocyctlia ocellus* Ehrenberg group (Sample 320-U1331C-13H-CC), Q29/4. **7.** *Dictyophimus craticula* Ehrenberg (Sample 320-U1331B-15H-CC), J33/3. **8.** *Thrysocyrtis (Thrysocyrtis) bromia* Ehrenberg (Sample 320-U1331B-4H-CC), T39/0.
