0 10 20 30 40 50 60 70 80 90 100 110 120 130 140 150 160									N/4		soupy	<p>Gray clay. Well sorted. Water saturated with loss of mass in uppermost m, especially the top 50cm.</p> <p>med-course grained silty sand occurring as patches at various horizons. However core is heavily deformed so unclear how far the sand has migrated within the core length</p> <p>@ 135cm - lower horizon becomes more silt rich. mm-scale pebbles and one 1cm clast recovered from just below surface. mm-scale angular shale</p>
