Unit	Lithology	Minerals	Veins	Structure Deformations	Notes
1	diabase alter. rubbly & coherent segments	Skeletal plag phenocrysts	White crystalline Calcite - mostly fractures with no vein material.		
			pale brownish veins with irregular halos		
			contact between	diabase	and distance talc amp.
			white calcite across core		is dipping at 55°
			vein network		with // foliation in talc - amp material.
2	(foliated) talc- schists @ clasts. of scip.	talc amph seip.	probably foliated metabasite		
			talc x cuts seip clasts. brown green (ep/proh) veins (irregular)		less altered intervals = diabase?
