

69A 10R

Unit	Lithology	Minerals	Veins	Structure Deformations	Notes
------	-----------	----------	-------	------------------------	-------

serpentine
 carbonate veins throughout - often multi-layer with green
 mm
 white veins - irregular & magnetic? altered
 Mylonite serpent.
 uniformly veined material with faint foliation, near horizontal - rotation feature in mylonite? a something else!
 thin
 thin carbonate?
 ? contact? diabase (gabro)?
 mix white + red 3-4mm

• rarrably broken up; i.e. first 20 cm fract. rubble, mostly coherent remainder
 • weakly mylonitic?
 • cut by mm-cm scale veins
 • large (~5mm) grains observed @ bott. of skn. (pk.?)
 - mesh/elongate texture
 Porphyrocl

1
 fine-grained serp
 light green vein
 serpent
 contact? vein?
 thick vein - dips @ 20° - possibly magnetic?

• highly veined
 • local "white" patches

1
 shattered serp
 serpent

• same as skn. 10R 2, but @ much less veins
