**Unit
Lithology**

Minerals

Veins

**Structure
Deformations**

Notes

1
serpentinite rubble

- pervasive and complete (high) serpentinization
- dark green locally some veining
- some pyx relicts
- one clast with stripes (layering of green (serp?) minerals)

rubble
no wear marks

- various fragment sizes (up to 4cm)
- green & white alteration on some fragments

2
meta-gabbro

- gray pervasively and partly altered
- fresh pyroxene plg

no measurements
perhaps low angle layering??
