

A

Deformation bands

- Conjugate sets of deformation bands or inclined deformation bands with or without apparent displacement
- Subhorizontal deformation bands with unknown displacement

Sediment-filled veins

- Array of sigmoidal to planar vein structures
- With or without apparent displacement (mm-scale)

Minor faults

- High-angle faults with small apparent displacements (mm-scale)
- High-angle faults with larger apparent displacement (cm-scale)
- Apparent displacement for high-angle faults may vary between normal and reverse
- Low-angle faults with unknown displacement
- Low-angle faults with apparent thrust displacement (mm to cm-scale)

B

Shear zones

- Several cm thick shear zone comprising sheared/disrupted sediment layers in a finer matrix
- Dark band at the base
