

THIN SECTION LABEL ID:

359-U1471A-11H-5-W 115/117-TSB-TS_76

Thin section no.: 76

Unit/Subunit:

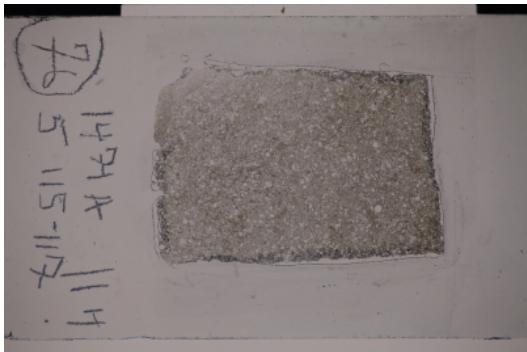

II

Observer: OMB

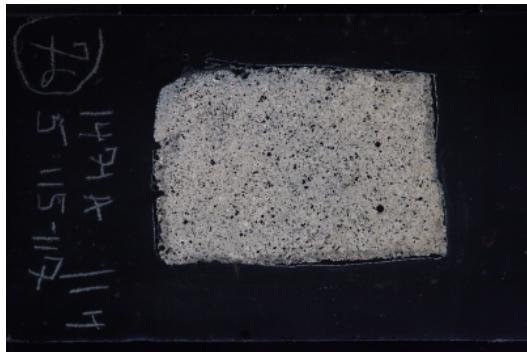

Thin section summary:

Planktic foraminiferal-rich PACKSTONE, abundant planktic foraminifera, common benthic foraminifera. Few organic matter specks. Porosity is only intraparticle, partially filled with micritic cement. Some of the foraminifera's walls are degraded.

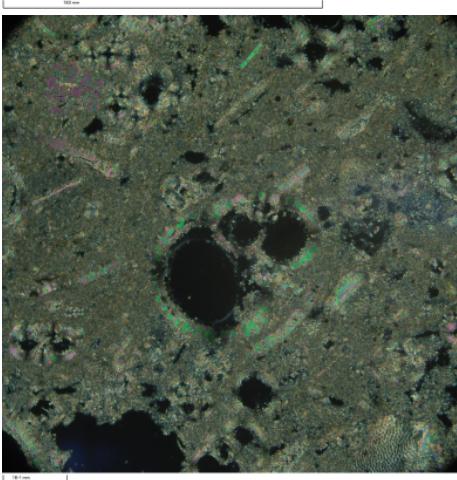

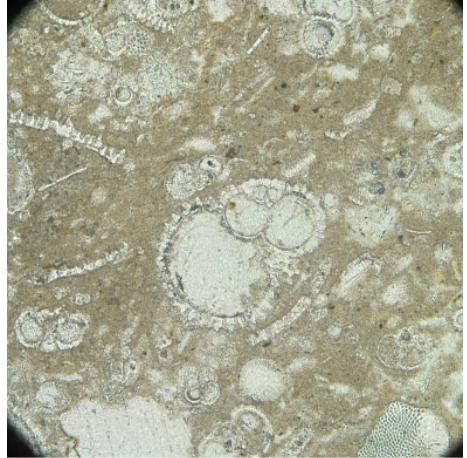

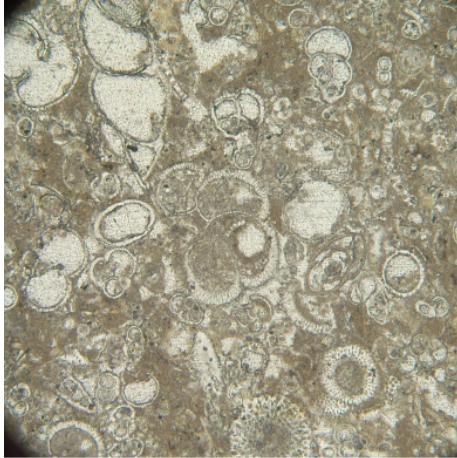

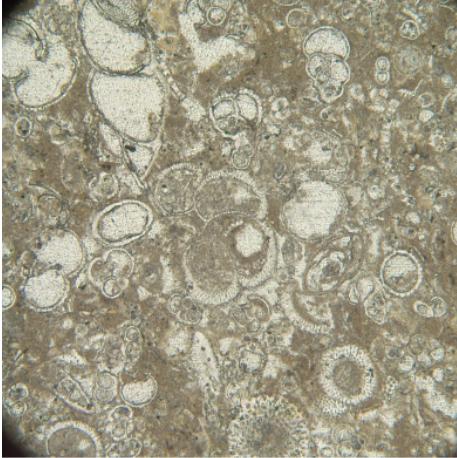

Whole thin section (plane-polarized):

Whole thin section (cross-polarized):

Photomicrographs:

**SEDIMENT/SEDIMENTARY ROCK**

Lithology: packstone

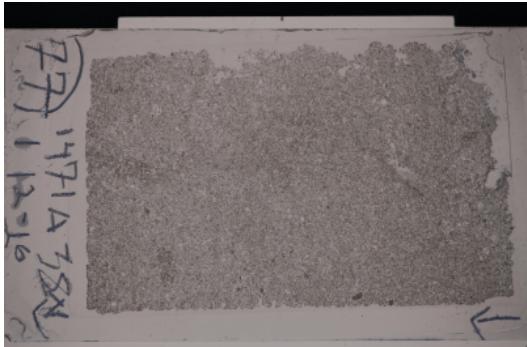

Skeletal components	major	intermediate	minor
type	foraminifera (planktic)	foraminifera (benthic)	
comment	Partially cemented, at times micritized		

Cement type: micrite cement

Porosity (major): intraparticle

THIN SECTION LABEL ID:	359-U1471A-38X-1-W 12/16-TSB-TS_77	Thin section no.: 77
Unit/Subunit:		Observer: OMB
Thin section summary:	Planktic foraminiferal-rich PACKSTONE, abundant planktic foraminifera, rare benthic foraminifera. Rare organic matter specks and possible apatite fragments. Residual intraparticle porosity, moldic and vuggy porosity. Porosity is filled with micritic and cements, the latter forms large crystals.	

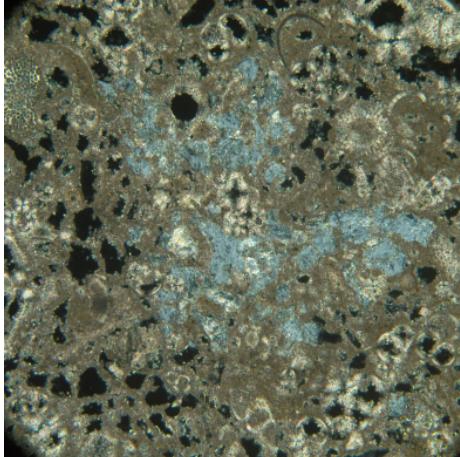

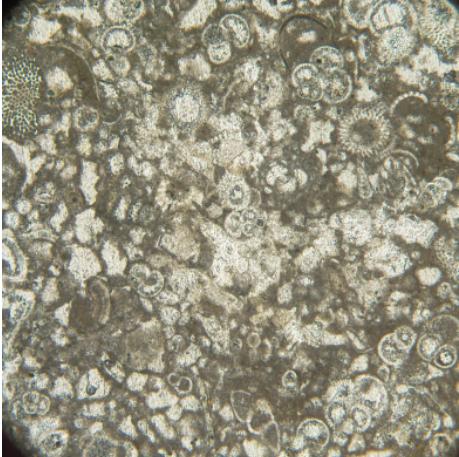

Whole thin section (plane-polarized):

Whole thin section (cross-polarized):

Photomicrographs:

Position	Photomicrograph description
Row 1, left	Porosity and Cements
Row 1, center	Porosity and Cements

SEDIMENT/SEDIMENTARY ROCK

Lithology: packstone

Skeletal components	major	intermediate	minor
type	foraminifera (planktic)	foraminifera (benthic)	
comment	Some broken, some recrystallized	R	

Cement type: micrite cement

Porosity (major): vuggy

General comments: Celectine cements

THIN SECTION LABEL ID:	359-U1471A-38X-2-W 86/90-TSB-TS_78	Thin section no.: 78
Unit/Subunit:		Observer: AL
Thin section summary:	Sample taken from 320.96 - 321 mbsf. Planktic foraminiferal-rich WACKESTONE, abundant planktic foraminifera, few benthic foraminifera. Rare organic matter specks and possible apatite fragments. Residual intraparticle porosity. Porosity is partially filled with microcrystalline spar and bladed cements, the latter forms large crystals. Some foraminifera tests are flattened due to compaction, some burrows have packstone texture.

SEDIMENT/SEDIMENTARY ROCK

Lithology: wackestone

Skeletal components	major	intermediate	minor
type	foraminifera (planktic)	foraminifera (benthic)	
comment			

Cement type: micrite cement

Porosity (major): intraparticle

THIN SECTION LABEL ID:

359-U1471A-68X-CC-W 17/20-TSB-TS_79

Unit/Subunit:

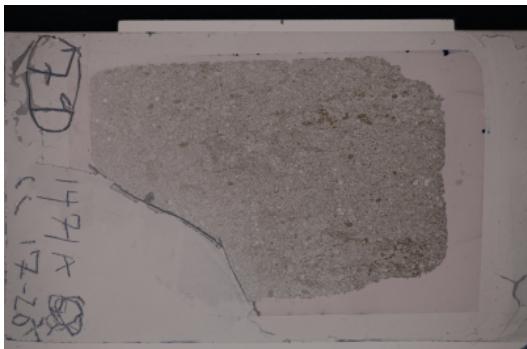

Thin section summary:

Planktic foraminiferal-rich PACKSTONE, abundant planktic foraminifera, rare benthic foraminifera, possible rare Echinodermata. Residual intraparticle porosity, moldic and vuggy porosity. Porosity is partially filled with micritic, doog theeth and clectine cements. Matrix is micticic and microsparitic, local patches of well-preserved micrite may be burrows or intraclasts.

Thin section no.: 79

Observer: OMB

THIN SECTION LABEL ID:	359-U1471E-2R-1-W 100/104-TSB-TS_83	Thin section no.: 83
Unit/Subunit:		Observer: AL
Thin section summary:	Sample taken from 597.3-597.34 mbsf. Planktic foraminiferal-rich PACKSTONE, abundant planktic foraminifera, common benthic foraminifera. Rare silica, apatite fragments and apatite. Residual intraparticle porosity and moldic porosity. Porosity is partially filled with microcrystalline spar and blocky calcite, the latter forms large crystals. Some micritic background have been recrystallized into microcrystalline spar.

Porosity (major): moldic

THIN SECTION LABEL ID:	359-U1471E-17R-3-W 62/65-TSB-TS_84	Thin section no.: 84
Unit/Subunit:		Observer: AL
Thin section summary:	Sample taken from 744.75-744.78 mbsf. Planktic foraminiferal-rich WACKESTONE, abundant planktic foraminifera, common small and large benthic foraminifera. Rare mollusk fragments, echinoid fragments , red algae, OM and apatite. Residual intraparticle porosity and moldic porosity. Porosity is partially filled with microcrystalline spar. Some micritic background is prominent and component sorting is poor.
