

Igneous Petrology: coarse grained granular olivine gabbro (interval 299), coarse grained granular olivine bearing oxide gabbro (interval 300) and coarse grained granular olivine gabbro with medium grained granular olivine gabbro domain (interval 301)

**Structural Geology:** Sequence of mylonitic to ultramylonitic zones with shallow to moderate dips. The shallow crystal plastic fabrics are cut by higher angle, more intense crystal plastic fabrics. Sub-horizontal, discontinuous fractures are filled with clay.
