

Expedition 363 summary, Figure F33. NGR data (orange) plotted on core photos (generated using CODD; Wilkens et al., 2017; <https://www.codd-home.net>) for all Expedition 363 sites. Dashed black bars indicate close-ups only available in the site reports. Solid black bars indicate close-ups (see Figure F34) selected as representative of the different site characteristics. Boundaries between background-colored fields represent isochrons for late Oligocene to recent subepochs based on shipboard bio- and magnetostratigraphic age models.
