Core shows pervasive fracturing and shearing up to cm scale, dominant extensional shear 46-69 cm; up to 5 cm thick cataclasites angular to rounded clasts, mm-size; cross-cut by younger fractures.

69-96 cm: Reduced fracturing; faulting, true preserved.

96 cm: Linations: 187/31, 38
187/31, 187 -

Below 96 cm: pervasively fractured & sheared, displaced by shear fault at 96 cm.

In the undegumed (granodiorite), orange jeld. (2 cm), light salma. (1.5 cm), Atz (1.5 cm), blth (0.3 cm).
