Granite - dolerite margin truncated by two shear faults, one sinistral (2 mm throw) and one possible dextral, (2 mm throw).

Dolerite has several hair line fractures. Play laths up to 5 mm, pyroxene less than 2 mm. Thin (less than 2 mm) black veins at the margin dolerite/granite. (magnetic?)

Homogeneous coarse-grained granite, K-feld (up to 2.5 cm), plagioclase (2.5 cm), biotite (< 0.5 cm). Biotite homogeneously distributed.
