**Description**

0-70cm - occasional, bleached, fresh fractures.

54-70cm - 1cm thick subvertical vein, possible shear has 1mm white rim with high porosity and mid-grey interior of fine grain size with light-grey to white (Qh) clasts, which have high porosity and fluidal texture.

Vein is traversed by white sub-mm thickness shear fractures, delaminar shear, a 1cm offset cut across vein from left to right.

Vein continues into next core.

AF-granite, Salmon in color, locally massive, bleached-rich, qh to 1cm.
