

Diagram illustrating the relationship between lines on the core surface and the plane surface. The diagram shows a sphere with a grid of lines. A red curve represents a line on the core surface, and a black curve represents a line on the plane surface. The angle between these two curves is labeled as 40°. Labels include:

- Line on the core surface (e.g., 270°, 30°)
- Line on the plane surface (e.g., 40° from 270°)
- Line on the cut (e.g., 0°, 10°)
