

BI	Classification	Visual expression
0	Absent: no bioturbation (0%)	
1	Sparse: few discrete traces and/or escape structures (<10%)	
2	Low: bedding distinct, low trace density, escape structures often common (10%–30%)	
3	Moderate: bedding boundaries sharp, traces discrete (30%–60%)	
4	High: bedding boundaries indistinct, high trace density with overlap common (60%–90%)	
5	Intense: bedding completely disturbed, limited reworking due to repeated overprinting (>90%)	
6	Complete: sediment reworking due to repeated overprinting (100%)
