

U1578A

Mass transport deposit with lower Oligocene/mixed Eocene flora identified within this range separating Pleistocene sediments.

~27.0 mbsf: Unconformity dividing the Early Pliocene, Zanclean stage, and the Eocene, Ypresian stage sediments recovered from this hole.

Lithology

White foraminifera-nannofossil ooze with clay

White nannofossil ooze to chalk with clay

Light gray clayey-nannofossil chalk

Volcanic deposit type

Massive lava flow
