

THIN SECTION LABEL ID: **396-U1573A-10R-4-W 113/115-TSB-TS49** Thin section no.:
 Observer: Sarah Lambart Piece no.:
 Thin section thickness: 30 Unit/subunit:
 Thin section summary: Sparsely augite plagioclase phyric basalt. The groundmass is composed of microliths of plagioclase (40%), 10% olivine (mostly recrystallized into saponite) and glass (completely recrystallized into saponite and other clay minerals). The basalt is moderately vesicular with mostly empty vesicles. A small amount (2%) of pyrite is also observed.

Plane-polarized: 60099661

Cross-polarized: 60099701

Igneous Petrology

Lithology: sparsely olivine-plagioclase phyric basalt lava flow **Groundmass grain size (avg.):** microcrystalline
Texture: hypocrystalline **Grain size distribution:** bimodal

Phenocrysts	Original (%)	Present (%)	Replaced (%)	Size min. (mm)	Size max. (mm)	Shape	Habit	Comments
Plagioclase	5				20	euhedral	tabular	
Clinopyroxene	2				16	anhedral	tabular	

Groundmass	Original (%)	Present (%)	Replaced (%)	Size min. (mm)	Size max. (mm)	Shape	Habit	Comments
Plagioclase	60				10	euhedral	elongate	
Olivine	10		90		5	euhedral	equant	
Glass	30	0		N/A	N/A	N/A	N/A	

Alteration

Alteration intensity: high **Total alteration (%):** **Recrystallization extent:** strong

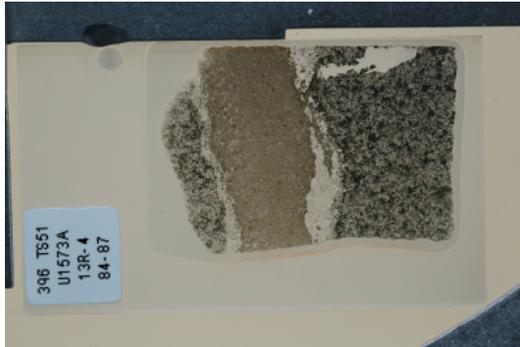

Alteration mineral	Percent	Comments
Clay, saponite	50	brown. Mostly replaced glass and olivine from the groundmass
Sulfide, pyrite	2	

Vesicle abundance (%): 20 **Vesicle shape:** subangular **Vesicle distribution:**
Vesicle min. size (mm): **Vesicle max. size (mm):** 10 **Vesicle mode size (mm):** 2

Vesicle fill composition	Percent
Total vesicle fill	10
Calcium carbonate	30
Clay, saponite	70
